Training · Module 03 · Sun 15 Nov

Show their app. Then walk the plan.

We have no testimonials yet. The branded demo replaces them: when an owner sees their own name, logo and products on a working app, the question changes from "can they do it?" to "when can we start?"

Time: 45 minutes read + record the base demo + mock walkthrough with the CEO

Pairs with playbook sections 06 and 07

01 · THE BASE

One white-label base. Three minutes to rebrand.

Build once, this weekend. Every branded demo after that is configuration: name, logo, colours, 10–20 products. If a demo takes more than 4 hours, the base isn't flexible enough yet.

Base must have	Why
Customer/buyer app (PWA is fine for demos)	Browse, search, cart, order, pay screen, order status. Owners judge by this screen.
Admin panel	Live order board, products, customers, a daily sales number. Owners fall in love here.
Rider or seller view	Shows the order travelling: the "it actually works" moment.
Config file for brand	Name, logo, colours, currency, sample catalogue from a CSV.
Seed data that looks real	Marathi/Indian names, real Pune/Nashik areas, sensible prices. "Test Product 1" kills the magic.

Variants of the same base: restaurant (menu + rider), distributor (retailer ordering + credit + schemes), marketplace (multi-seller + commission), booking (slots instead of cart). Build the distributor/marketplace variant first: it serves spare parts and agri.

Branded demo checklist (per qualified lead)

☐ Only for leads with 4–5 checks and a walkthrough slot already booked.

☐ Logo, colours and 10–20 products pulled from their Instagram, Google listing, Zomato page or catalogue.

☐ Use their real outlet name, area and product names. Prices close to real.

☐ One feature that answers the leak they told you about: credit limits for the distributor, the "no commission" checkout for the restaurant.

☐ Tested on a phone, in mobile data, not just on your laptop.

The 2-minute video (shot list)

Time	Show	Say (voice-over, Marathi is fine)
0:00–0:10	Their logo on the app's home screen.	"__ ji, this is your app. Your name, your products."
0:10–0:50	Customer/retailer places an order and pays.	"Your customer orders in four taps, no phone call needed."
0:50–1:20	Order pops up on the admin board.	"You see it instantly. No WhatsApp scrolling, no mistakes."
1:20–1:45	Rider/seller accepts and delivers.	"Your rider gets it, and the customer sees the status."
1:45–2:00	The fix for their leak (credit report, commission saved).	"And this is the [leak] we talked about. See you at [time] to walk through the plan."

Send it with S6. Record on a phone with a screen recorder. Clean audio matters more than editing.

02 · THE WALKTHROUGH CALL (15 MINUTES)

Never send a PDF and wait. Share your screen and walk it.

Minute	Do	Say
0–2	Recap their goal and leak, in their words.	"Last time you said ₹__ a month goes to __. Today's plan fixes that."
2–5	Open the demo live. Let them tap around if possible.	"Try placing an order yourself."
5–9	Three options side by side.	"Most owners like you pick Growth. Here's why."
9–11	Timeline with milestones and the weekly demo.	"You see progress every week before each payment."
11–13	Price, 40/30/30, care plan, risk reversal.	"The number in the proposal is the number you pay."
13–15	The ask (Module 04).	"Which option feels right for you?" Then stop talking.

Presenting the three options

- **Describe them right to left:** start with Scale (₹4L) so the full vision is on the table, then Growth, then Launch. Growth now looks sensible, and Launch is the safe floor.
- **Recommend one.** "If I were in your place, I'd take Growth, because [their leak]." Owners want an expert opinion, not a menu.
- **Show what's excluded,** not just what's included. It prevents fights later and signals experience.
- **Tie every tier to money:** "Launch stops the order errors. Growth adds tracking and offers, which bring repeat orders."

Proposal: the 8 parts (from the playbook)

1. Their goal in their words + the payback maths.
2. 3–4 screens from their branded demo.
3. Three options side by side, with inclusions and exclusions.
4. Timeline with 3–4 milestones (two weeks of buffer built in).
5. Price, 40/30/30 and the care plan.
6. Risk reversal: the six promises.
7. Proof: the European booking platform and your loyalty SaaS, with dashboard screenshots.
8. Valid for 7 days, plus the next available start date.

Template already started: `sales/spare-parts-proposal-draft.md`. Reuse its structure for every lead.

Assignment (due Sun 15 Nov night): base demo working; a 2-minute video recorded on the distributor/marketplace variant; one mock walkthrough with the CEO in chat, using the spare parts proposal.
